

# Pond Bacteria

SLUDGE REMOVER  
& SHORELINE TREATMENT

- Reduces bottom-sludge (muck)
- Reduces murky water
- Reduces ammonia, nitrite, nitrate & phosphate
- Reduces odors

This product is a natural formulation of beneficial pond bacteria for use in large ponds & lakes. It contains species of cold water bacteria, making this product effective in water temperatures ranging from 35-95 F. This product has been produced into dissolvable blocks, which sink to the bottom of the pond and naturally remove the bottom-sludge (muck) that has accumulated from decaying plant matter, fish wastes and other organic waste materials.

## DIRECTIONS (BOTTOM-SLUDGE):

Apply 64 dissolvable blocks per surface acre of pond or lake water, every 4 weeks or as needed. The 1 oz blocks will sink to the bottom of the pond and begin to eliminate the organic build-up of bottom-sludge (muck).

## DIRECTIONS (SHORELINE):

Apply 1 dissolvable block, every 6-8 feet, as a shoreline treatment.

25 lbs (1 oz dissolvable blocks)
