

This product contains an all-season blend of beneficial pond bacteria, including multiple cold-water bacteria able to perform in water temperatures as low as 35 F. Slightly different blend than our Pond Clarifier Bacteria formula to eliminate Muck and Sludge. 3 gram dissolvable pellets, quickly sink to the bottom of the pond to work on muck and sludge. This product also eliminates murky water, odors and excess nutrients such as nitrogen and phosphorus.

3 Gram Pellets

Muck & Sludge Remover

Direction: Apply One Ounce throughout the pond area. Where ever Muck and Sludge are present. 10 pellets equal one application per 1,000 gallon pond. Apply every one or two weeks or as needed.

Odor Control: This formulation will also provide odor control by eliminating the build-up of dead and decaying organic wastes, which are the source of these odors.

Eliminates Murky Water: Water clarity is accomplished as the pond bacteria in these pellets eliminate dead and decaying organic wastes, which accumulate as suspended solids, causing murkiness in the pond water. As these organic wastes are removed, water clarity drastically increases.

Eliminates Bottom Sludge (Muck): The formulation will also eliminate bottom sludge (the accumulation of decaying plants, grass clippings, leaves, fish wastes, and other organic waste materials).

Nutrient Reduction: This formulation will eliminate toxic ammonia nitrite, as well as excess problem-causing nutrients such as nitrate & phosphate from pond water.
